SUMMARY

Backend-focused Software Engineer with 4+ years of experience building scalable API-driven systems and AI-powered automation pipelines. Specialized in Python-based backend development, communication platform engineering, and production ML pipelines using Whisper, Ollama, and LLMs for audio intelligence. Experienced in designing on-premise AI systems, RAG-based chatbots, and high-volume messaging gateways processing 300K+ daily transactions. Strong foundation in service integration, performance optimization, and cross-platform mobile development.

TECHNICAL SKILLS

Programming Languages: Python, PHP, Java, JavaScript

Backend Frameworks: FastAPI, Django, Flask, Laravel, CodeIgniter

AI/ML & LLMs: OpenAI API, HuggingFace Models, Whisper (ASR), PyAnnote Audio, Ollama, LangGraph, RAG Pipelines, LLM Integration

Cloud & DevOps: AWS (Deployment), GCP (Deployment), Docker, RabbitMQ, JWT Authentication

Databases & Observability: MySQL, System Caching, New Relic, Looker Studio, Metabase, Git

Operating Systems: Linux, Windows

Familiar With: Flutter, React JS ,Android SDK

WORK EXPERIENCE

RailYatri, Kochi Ernakulam: Technology Specialist

May 2025 – Present

- Architected a centralized communication service processing **300K+ daily transactions** across WhatsApp Business API, SMS, Email, and IVR, serving as the single messaging gateway for IntrCity SmartBus and RailYatri Ticketing, improving system reliability by **40%**.
- Designed an **event-driven API architecture** using event IDs and standardized REST endpoints, enabling seamless multi-channel communication integration without direct vendor coupling.
- Reduced message processing latency by **refactoring core communication pipelines**, improving throughput and system performance under high-volume load.
- Built a **real-time reporting and observability layer** with delivery tracking, failure analysis, and automated error handling, reducing manual monitoring effort by **60%**.
- Deployed an **on-premise AI call intelligence system** using Whisper (ASR), Ollama (open-source LLM), and PyAnnote Audio on a dedicated leased-line server, automatically transcribing and analyzing customer call recordings to identify bus-level issues and recurring complaint patterns, enabling operations teams to act on insights without manual review and with zero dependency on paid APIs.
- Built and deployed a **production AI travel chatbot** using LangGraph, OpenAI API, and a RAG pipeline, dynamically answering passenger queries using live internal API data.
- Engineered **workflow automation pipelines using n8n (Docker-based)**, integrating Slack with Google Sheets to automate internal communication and operational reporting.

LEVANTAR SOLUTIONS, Vazhakkala, Ernakulam: Software Developer (Part-Time)

Oct 2022 – April 2025

- **Led development of SiteManager**, a construction management platform covering labour attendance, site progress tracking, material inventory, document management, and client billing – owning the full product lifecycle as primary developer on a small team.
- **Built core system features** including role-based access control (RBAC), automated PDF generation, email delivery pipelines, and real-time dashboards for operational reporting across SiteManager and BoutiqueManager.
- **Modernized BoutiqueManager** legacy inventory system using CodeIgniter, improving stock management workflows and reducing manual processing overhead for retail operations.

- **Contributed to Alchemy**, a core banking platform, developing PHP REST APIs for account management, KYC, loan origination, payment collections, and transaction ledger reporting – supporting deployment as a sellable product to banking clients.
- **Built offline-first field collection app** for banking agents using Java and PHP REST APIs, leveraging SQLite for local storage and auto-sync on network restoration, ensuring zero data loss in low-connectivity environments.
- **Developed bank management dashboard app** using Flutter and Dart, enabling bank owners to monitor transactions, track collections, and approve loans in real time via backend APIs.
- **Integrated Razorpay payment gateway** with secure transaction handling, error management, and reconciliation logic to ensure financial accuracy across the platform.

EDUCATION

MCA., Master Of Computer Applications

APJ Abdul Kalam Technological University, Trivandrum, Kerala
College Of Engineering, Chengannur

Oct 2022 – March 2025

8.7 CGPA

CERTIFICATIONS & ACHIEVEMENTS

Service Excellence Award – RailYatri Annual Day

2025

- Recognised for outstanding contributions as Technology Specialist, honoring impact across communication platform engineering and AI-powered automation initiatives at RailYatri.

IBM AI Engineering Professional Certificate (In Progress) – Coursera

2025 – Present

- Completed **Machine Learning with Python (Course 1 of 6)**, covering supervised and unsupervised learning, model evaluation, and scikit-learn.

India's Topper – NPTEL “Programming in Java”

Jul 2023 – Oct 2023

- **Secured highest rank nationwide** among thousands of participants, demonstrating strong mastery in Java and object-oriented programming.

India's Topper – NPTEL “The Joy of Computing in Python”

Feb 2023 – Jun 2023

- **Achieved highest rank nationwide**, demonstrating exceptional proficiency in Python programming and computational thinking.

Reboot Kerala Hackathon 2020 – Top 10

2020

- **Secured Top 10 statewide** among 30+ engineering colleges as the only non-engineering college participant – built a water management app with automated billing and GPS-based location verification.
